Camera Flash Trigger

Instruction Manual

Thank you for purchasing CT-18 Series Camera Flash Trigger. For a continuous synchronization for Camer Flash Trigger is based on a wireless remote system. The receiver is equipped with an advanced wireless system, it has already function, that very low power consumption is needed. The receiver is used with this camera Flash Trigger (CT-18), and it can work with synchrony responses under the advanced MCU control. It can work with any model of flash for any different strobe camera.

Connection
Mount Mounting Bracket (CT-6 Flash Shoe Extension (6 pin) on the receiver.
Turn on the Power Switch (2)

Operation
Set the transmitter and receiver in the same channel setting.

Make your own settings and choose the receiver in the channel that is not in use.

When the device is not in use:
1. The transmitter consumes little power and can last over three years when it is in use with minor operation.
2. The receiver is equipped with a power on/off switch. To reduce the drain on the batteries when the device is not in use, please slide the power OFF position.

Channel Settings:
There are 16 channels in this device. Set the transmitter and receiver on the channel before use. Check the table for channel setting as below.
