Warning

To prevent damage to the product or injury to you or to others, read the following warnings in their entirety before using this product. Keep these Warning where users can read them for ready reference.

▲ Do not disassemble or modify. Should the product break down, send the defective back to the authorized service center for inspection and maintenance.
▲ Keep dry. Do not handle with wet hands, immerse in water, or expose to rain.
▲ Keep out of reach of children.
▲ Please put the device in a ventilation environment and keep the parts of lighting and heat dissipation holes are unobstructed. Do not use in flammable environment.
▲ As this product adopts make and break device, please keep it easy to be used.
▲ No touching the heating parts of this product.
▲ Please turn off the power and wear insulated gloves before installing and connecting accessories. When replacing the tube or modeling lamp, please make sure that the tube is cool and wear insulated gloves to prevent burns.
▲ Do not flash directly towards naked eyes (especially those of babies), otherwise it may lead to visual impairment.
▲ Disconnect from the power supply when it will not be used for an extended period.

Caution

▲ After 30 continuous flashes at full power, the flash should be cooled down for about 3 minutes. Overheating will occur if it is used continuously without cooling down.
▲ Do not keep using the modeling lamp for a long time; otherwise flammable accessories attaching to flash head, e.g. softbox will get burnt. A 10-minute time is recommended in this case. After 10 minutes, cool it down for 1 minute.
▲ When using a snoot, do not keep the modeling lamp on for a long time or fire too frequently (not over six times for one minute). Overheating will result in damages for strobe housing and/or studio light.
▲ Avoid sudden impacts as this can damage the flash tube and/or modeling lamp.
Modeling Light Installation
Power should be off before the modeling light installation and then insert the modeling light carefully. Caution: Do not touch the lamp with your bare hands. Oil residue from your fingers can cause the surface of the lamp heat unevenly and fail to work.

Power Connection
Connect the flash to an AC power source via power cord and turn on the power switch (1). The charging LED indicator (8) will grow red, meaning the unit is charging, no flash at this moment. When the unit is ready to fire, the light will turn green.

Flash Output Control
Flash output controller (7) controls the power radio, adjustable stepless power from 1/8 to full. It can meet customers’ requirements for light in different environments. (Note: When adjusting the power from full power to a lower setting, press the test button to release the power in the capacitor, so when recharged, the flash output will be in the corresponding setting.)

Test Button
To fire the flash without taking a picture, push the test button. It will also adjust the brightness when combined with the flash output controller (7).

Sync Triggering
The sync cord jack (2) is a Φ3.5 mm mini plug. When working with sync cord triggering method, insert one end of sync cord or a trigger plug into it; the flash then can be fired synchronously.

Slave Trigger Model
The flash will be fired synchronously at one external flash. This model can act as an auxiliary lamp, offering various light effects.
• **Modeling lamp**
  Modeling lamp switch (6) decides whether the modeling lamp is on or off: the switch set left (O position), it’s off; the switch set right (I position), it’s on. It turns off automatically when the flash fires.
  NOTE: Do not keep long time in using the modeling lamp. It’s better to be cooled down for 1 minute after 5 minutes continuous use.

• **Tube Replacement**
  Turn down the power before replacing the flash tube and wear insulated gloves. Then, loosen the iron wire on the tube, keep a balanced hold on the two feet of the flash tube and pull out the old tube gently. Take down the feet casing to put it on the new one. Hold two feet of the new tube, and target directly towards the two copper outlets, then push them slightly in. Tighten the iron wire to fix the flash tube.

• **Buzz Function**
  The device is equipped with buzz function. A “BI” sound will be heard when it is fully charged and ready to fire.
