Instruction Manual
说明手册

Chinese English Bilingual | 中英文双语
FOREWORD

Before using this product
Please read this user manual carefully in order to ensure your safety and the proper operation of this product. Keep for future reference.

Thank you for purchasing a GODOX product.
WITSTRO AD360 flash system is an AD360 flash with a bare tube, external power pack, wireless manual power control, and a range of dedicated light shaping accessories. AD360 is 5 to 7 times powerful as typical hotshoe flashes with the size and weight alike. It offers studio quality light for outdoor and live shooting. The AD360 offers:
- Studio quality light: up to 360Ws, GN 80 (m ISO 100, with AD-S2 standard reflector). Approx. 28mm flash coverage when operating on a camera with the standard reflector. One AD360 can overpower the sun.
- External battery pack: PB960 (lithium, 11.1V/4500mAh), 0.05-4.5s recycling and 450 full power flashes.
- Lightweight and portable even with power and accessories
- Wireless control on power levels and triggering (with FT-16 trigger)
- Wide-range accessories: softbox, beauty dish, snoots, color gels, etc. All lighting accessories fit for barebulb flashes from most brands.
- Power adjusts from full power to 1/128 in 1/3 stop increments
- Stable color temperature at 5600±200K over the entire power range
- Multi flash, Focus-assist beam on/off & Hi-Speed sync triggering

The powerful and portable AD360 meets the demands of freelance commercial photographers, photojournalists, wedding and beach portraiture shooters, event and backpack photographers, photograph enthusiasts, etc. It is compatible with market-available cameras from Canon, Nikon, Pentax, and Olympus, etc and fits for almost any flash trigger.

FOR YOUR SAFETY

- Always keep this product from rain or dampness to avoid fire or electric shock.
- This product contains high-voltage electronic parts. Touching the high-voltage circuit inside it may result in electric shock. Do not disassemble. Should repairs become necessary, this product must be sent to an authorized maintenance center.
- Stop using this product if it breaks open due to extrusion, falling or strong hit. Otherwise, electric shock may occur if you touch the electronic parts inside it.
- Do not fire the flash directly into the eyes (especially those of babies) within short distances. Otherwise visual impairment may occur. When taking pictures for babies, keep the flash unit at least 1 meter (3.3 feet) away from them. Using bounce flash to reduce light intensity is also recommended.
- Do not use the flash unit in the presence of flammable gases, chemicals and other similar materials. In certain circumstances, these materials may be sensitive to the strong light emitting from this flash unit and fire or electromagnetic interference may result.
- Do not leave or store the flash unit if the ambient temperature reads over 50°C (e.g. in automobile). Otherwise the electronic parts may be damaged.
- Be cautious when using the AD360 on your camera. AD360 is slightly heavy so that an AD360 on your camera may damage the camera hotshoe.

**Name of Parts**

- **Body**
  
  01. Accessory Mount  
  02. Accessory Locking Ring  
  03. Flash Tube  
  04. Tube Socket  
  05. Umbrella Mounting Hole  
  06. Release Button  
  07. Power Socket

- **Control Panel**

  08. Wireless Control Port  
  09. Sync Cord Jack  
  10. PC Sync Socket  
  11. MF-Assist Beam  
  12. Light Sensor  
  13. Control Panel  
  14. Hotshoe Stand

---

The flash unit is not powered by itself, but draws power from Godox power pack PB960 (sold separately).

---

**Included Accessories**

1. Flash tube*1  
2. Protecting bag*1  
3. Mini stand*1  
4. Off-camera adapter*1  
5. Reflector*1  
6. Power cable*1  
7. Reflector diffuser*2  
8. Instruction manual*1

---

**Separately Sold Accessories**

The product can be used in combination with the following accessories sold separately, so as to achieve best photography effects:

FT-16 Remote Control, Softbox, Beauty Dish, Fold up umbrella, Snoots, Light stand, etc.

---

**Installing Reflector (Other Accessories)**

1. Rotate Accessory Locking Ring (2) counter-clockwise until it is loose.
2. Insert the reflector into the Accessory Mount (1).
3. Rotate Accessory Locking Ring (2) clockwise to lock it up. Do not overtighten.
Attaching Flash Tube
1. Remove the reflector or other accessories from the flash head.
2. Match the red dot on the base of the flash tube with the red dot in the Tube Socket (4). Push the flash tube in until it is securely seated into the socket.

Connecting to a Power Pack
1. Before connecting, make sure that the power pack is turned off.
2. Plug one end of Power Cable into Power Socket (7) of the flash unit, and insert the other end into the output socket of the power pack.
3. Turn on the power pack. Normally the flash unit will be fully charged and ready to work.

- The flash unit is not powered by itself, but draws power from Godox power pack PB960 (sold separately). For the instructions of the power pack, see the related user manual.

Replacing the Off-Camera Adapter
1. Loosen the locking ring on the mounting foot.
2. Slip the mounting foot of the flash unit into the camera hotshoe.
3. Secure the flash unit by rotating the locking ring the direction of the row.

Connecting the Flash to a Camera

Using the Flash
1. Power Management
ON/OFF Power Switch (20) controls the on/off of the flash unit. Turn off the power pack if the flash unit will not be used for an extended period.
2. Flash Output
Flash output can be varied from 1/128th power to 1/1 full power in 1/3 stop increments. To obtain a correct flash exposure, use a hand-held flash meter to determine the required flash output.

Adjust the power output by rotating Select Dial (22). The following table makes it easier to see how the stop changes in terms of f/stop when you increase or decrease the flash output:

<table>
<thead>
<tr>
<th>Figures displayed when reducing flash output level</th>
<th>1/1</th>
<th>1/2</th>
<th>1/4</th>

</tbody>
</table>

←Figures displayed when increasing flash output level

When “OF” is shown on the LCD display, it means no flash output and flash firing is turned off.

3. M Mode: Manual Mode
Press MODE Selection Button (18) to enter M mode. In this mode, you can set the flash unit onto your camera hot shoe or your trigger hot shoe for firing. Before shooting, adjust the power output of the AD360. When the camera’s shutter is pressed, the flash will fire. Slave triggering mode is not available in M mode.

4. S1 Mode: S1 Slave Triggering Mode
Press Mode Selection Button (18) to enter S1 mode. In this mode, the flash unit can function as a slave flash for creating multiple lighting effects. It is respectively applicable to manual flash environment.

In S1 mode, the flash unit will fire synchronously when the master flash fires, the same effect as that by the use of radio triggers.

5. S2 Mode: S2 Slave Triggering Mode
Press Mode Selection Button (18) to enter S2 mode. In this mode, the flash unit can function as a slave flash for creating multiple lighting effects. It is applicable when using a TTL master flash.

In S2 mode, the flash unit will ignore a single “preflash” from the master flash and will only fire in response to the second, actual flash from the master.

6. RPT Mode: Stroboscopic Flash
Press Mode Selection Button (18) to enter RPT mode (Multi/Stroboscopic flash). With stroboscopic flash, a rapid series of flashes is fired. It can be used to capture multiple images of a moving subject in a single photograph.

You can set the firing frequency (number of flashes per sec. expressed as Hz), the number of flashes, and the flash output.

For setting procedures, see the following:
- Press the Mode Selection Button (18) so that “RPT” is displayed.
- Press Set Button (19) to select the item to be set. The item blinks.
- Rotate Select Dial (22) to set a desired number.

Calculating the Shutter Speed
During stroboscopic flash, the shutter remains open until the firing stops. Use the following formula to calculate the shutter speed required to capture the full sequence of flashes:

\[
\text{Number of flashes / Firing frequency} = \text{Shutter speed}
\]

For example, if the number of flashes is 10 and the firing frequency is 5 Hz, the shutter speed should be at least 2 sec.

Note:
- Stroboscopic flash is most effective with a highly reflective subject against a dark background.
- Using a tripod, a remote switch, and an external power source is recommended.
- A flash output of 1/1 or 1/2 cannot be set for stroboscopic flash.
- Stroboscopic flash can be used with “buLb”.

To avoid overheating and deteriorating the flash head, do not use stroboscopic flash more than 10 times in succession.

Maximum Stroboscopic Flashes:

</table>
7. Hi-Speed Sync Triggering
To enter Hi mode, press both Mode Selection Button (18) and Set Button (19).
Press Mode Selection Button (18) again to exit Hi mode.
In Hi hi-speed sync triggering mode, you can use a hi-speed sync trigger to have
your flash unit synchronize with all shutter speeds of
cameras (max. 1/8000 second, up to your camera). This is
convenient when you want to use aperture-priority for fill-flash
portraits.

Note:
- Hi-speed sync triggering mode is effective only when the
  flash unit is used together with hi-speed sync trigger, e.g.,
  Godox Cells II transceiver.
- Hi-speed sync triggering mode is not available when the flash unit is mounted
  onto the camera hotshoe.

To avoid overheating or deteriorating the flash head, the over-temperature protection
function will be activated automatically after 10 continuous high-speed flashes and the
recycle time becomes 10s longer.

Number of flashes that will activate over-temperature protection in high-speed sync
triggering mode:

<table>
<thead>
<tr>
<th>Power Output Level</th>
<th>Number of Flashes (Approx.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/1</td>
<td>10</td>
</tr>
<tr>
<td>1/2</td>
<td>15</td>
</tr>
<tr>
<td>1/4</td>
<td>20</td>
</tr>
<tr>
<td>1/8</td>
<td>30</td>
</tr>
</tbody>
</table>

8. MF-Assist Beam
Under poorly-lit or low-contrast conditions, you can press MF-Assist Beam Button
(16) to turn on the MF-assist beam in order to make it easier to autofocus.
When the MF-assist beam is lit, † is shown on the LCD display.

9. Buzz Function
The buzz function can be controlled by pressing BUZZ Button (17).
When the buzzer is turned on, ⚡ is shown on the LCD display. The buzzer provides
an indication that the AD360 flash unit has fully recycled.

10. Wireless Control Function
- The flash unit is built in with a Wireless Control Port (8) so that you can wirelessly
  adjust the power level of the flash and control the on-or-off of your flash, focus assist
  lamp and buzzer, as well as trigger the flash.
- To control the flash wirelessly, you need a Godox FT series remote control set
  (on-camera and on-flash). Insert its receive end into the Wireless Control Port (8) on
  the flash and insert the transmit end into the camera hot shoe. Settings made on the
  hotshoe-mounted transmit and receive ends will be wirelessly communicated to the
  flash. Then you can press the camera shutter-release button to trigger the flash. You
can also hold the transmit end at hand to control your off-camera AD360.
- For full instructions on the use of FT series remote control, see its user manual.
- When the flash unit receives wireless signals, " is shown on the LCD display.

11. Sync Triggering
The Sync Cord Jack (9) is a Ø3.5mm plug. Insert a trigger plug here and the flash
will be fired synchronously with the camera shutter.

12. PC Sync Triggering
Insert one end of a PC sync cable into the PC Sync Socket (10) of the flash unit and
the other end into the PC Sync Socket on the camera. The flash unit will fire when
the camera's shutter-release button is pressed.

**Protection Function**

**Over-Temperature Protection**
- To avoid overheating and deteriorating the flash head, do not fire more than 75
  continuous flashes in fast succession at 1/1 full power. After 75 continuous flashes,
  allow a rest time of at least 10 minutes.
- If you fire more than 75 continuous flashes and then fire more flashes in short
  intervals, the inner over-temperature protection function may be activated and make
  the recycling time about 10 to 15 seconds. If this occurs, allow a rest time of about
  10 minutes, and the flash unit will then return to normal.
- When the over-temperature protection is started, ‡ is shown on the LCD display.

Number of flashes that will activate over-temperature protection:

<table>
<thead>
<tr>

**Maintenance**

- Shut down the device immediately should abnormal operation be detected.
- Avoid sudden impacts and the lamp should be dedusted regularly.
- It is normal for the flash tube to be warm when in use. Avoid continuous flashes if unnecessary.
- Maintenance of the flash must be performed by our authorized maintenance department which can provide original accessories. The flash-tube is user-replaceable. Replacement tubes can be obtained from the manufacturer.
- This product, except consumables e.g. flash tube, is supported with a one-year warranty.
- Unauthorized service will void the warranty.
- If the product had failures or was wetted, do not use it until it is repaired by professionals.
- Disconnect the power when cleaning the unit or when changing the flash tube.
- Changes made to the specifications or designs may not be reflected in this manual.
